

## How Site Monitoring Works

Website monitoring is a very important item for a site owner to think about. If your site goes down, even for a short period of time, your users will be at the very least skeptical of the product or service you are providing.

By properly implementing a site monitoring service you can keep sleep well at night knowing that your website is up and running.

[VisualSiteMonitor.com](http://www.visualsitemonitor.com) is a web based site monitoring service which scans your website every 5, 10 or 15 minutes. During the scan we log important information such as time/date, response time and status (up or down). If our monitor senses that your site is down, we immediately notify you via email, SMS (text message) and or a voice message.

We don't stop at a website monitor, we also provide detailed site uptime/downtime statistics and reporting. Our world class reporting tools offer you the ability to quickly search you monitor log to give you a detailed view on website uptime.
